I work on technologies that bring people together. My research in Human-Computer Interaction (HCI) and Computer-Supported Cooperative Work (CSCW) involves building the future of remote collaboration, telepresence, and social computing. I have designed, prototyped, and evaluated user experiences for these purposes, involving emerging technologies such as virtual, augmented, and mixed reality (VR/AR/MR), telepresence robots, tangible and haptic user interfaces, drones, and video communication. I have conducted user studies and empirical research in HCI using methods such as interviews, observations, lab experiments, field studies, ethnographic methods, qualitative, and quantitative analyses, to understand user behaviours and various technologies' impacts on factors such as group collaboration, awareness, and presence. I have published papers at top-tier venues such as ACM CHI, CSCW, and DIS. I am both a researcher and a builder, with experience in full-stack development, and comfortable embracing a variety of tools to create prototypes. I have a rich range of experience in front-end web development, back-end server coding, AR/VR development, mobile app development, and robotics programming. I like to blow minds and warm hearts.

PERSONAL PROJECTS

XRmas: XR Multi-Agency Spaces for Remote Family Meetings during Christmas Nov. 2020 - Jul. 2021
In collaboration with Yaying Zhang (Microsoft) and Sean Rintel (Microsoft Research Cambridge)

Video demo: <https://youtu.be/vsGzLRctESA> Project page: <https://tinyurl.com/xrmas-proj>

An XR telepresence system that allows a remote family member to visit their loved one's home during Christmas. XRmas enables a remote (VR) user to visit the living room of a local (HoloLens and smartphone-AR) user and interact in a virtual augmented space together in a Christmas context. The remote user can spawn virtual gifts, decorate the room with virtual ornaments, and light up the Christmas tree in the local user's room via IoT.
